

Readme File

Directional slope calculations.

1. unzip the file to a location of your choosing.
2. Open ArcMap (at present, this won't run under ArcGIS Pro).
3. Open an Arc Catalog pane/window. Navigate to the folder you unzipped – the file you run will be in the directionalslope folder under custom slope tools.
4. Double click on the Directional Slope file. This should open up a new window which asks for two input files (your filled DEM and your flow direction raster) and the location/name for your output file.

Output is expressed as a percentage slope. For more information, hit the “tool help” button.
